- ❖ Reduce administration costs through structured program control by 35%

THE CAMELEAN ADVANTAGE

- ❖ Scalable enterprise system which can grow with an organization's size / needs and integrate in their information backbone.
- ❖ Knowledge of best practices can be captured and re-used in a structured way.
- ❖ Web interface ensures real-time program status updates anytime anywhere.
- ❖ Empower cross-functional enterprise collaboration across multiple locations and time zones through a central data repository.
- ❖ Increase transparency and accountability through program and issues visibility to internal and external stakeholders.
- ❖ Optimize Resources by balancing project assignment with organizational resource constraints.
- ❖ Enforce standardized organizational processes with the lifecycle management engine and support for quality initiatives.
- ❖ Make informed decisions with configurable and customizable reports.

Program Management

PLAN, EXECUTE and TRACK your programs as per corporate business objectives through a single enterprise-wide collaborative framework

System Requirements

PLATFORMS:
Windows, Linux, Unix and any other Java 1.4 compatible OS

BROWSERS SUPPORTED:
IE 5.0, Netscape 7.0, Mozilla 1.0 and other CSS standards compliant browsers

HARDWARE: [Minimum Configuration]
1 GHz, 512 MB RAM, 1 GB disk space

CAMELEAN's Other Solutions

CAMELEAN's® other solutions include Collaborative Process Lifecycle Management [cPLM] that help reduce the disconnect between design and production.

CAMELEAN/BIW addresses the specific requirement of fastener management for automotive Body in White (BiW) variants. It also helps in tooling, weldgun selection and validation.

CAMELEAN/PT is a powerful feature based process planning tool for Power Train manufacturing. Its powerful tolerance chart feature helps in analyzing processes to reduce cycle time and product cost.

CAMELEAN/GA is a powerful tool to plan the entire General Assembly processes for a product. It not only balances the line but also accounts for all components for a given product mix.
